

# Isaac Amarilla

Location: Luque, Paraguay | Phone number: +(595)982601005 [Email](#) | [Github](#) | [LinkedIn](#)

Full-stack Developer with over 12 years of experience. Skilled in designing and implementing innovative software solutions across various industries. Proficient in a wide range of technologies for Web, Mobile, and Artificial Intelligence Software. Experienced in project management, team leadership, agile methodologies, UI/UX, DevOps, and Cloud Solutions Architecture.

## Top Skills (over 5 years of professional experience)

**Backend Development:** Laravel, TypeScript, Node.js, Express, NestJS, PHP, Python, Django, Flask, Express.js, Java, RabbitMQ, Kafka.  
**Frontend Development:** HTML5, CSS3, JavaScript, TypeScript, React.js, React Native, Redux, Vue.js, Vuex, Android Studio (Java), Lottie, Expo, Storybook.  
**DevOps & Cloud Solutions:** AWS (EC2, EKS, EBS, Secrets, CloudWatch, RDS), Kubernetes, Terraform, Docker, Bash, Zsh, GitHub Actions, Jenkins, DigitalOcean, OpenTelemetry, ArgoCD, Sentry.  
**Databases:** MySQL, PostgreSQL, MongoDB, Redis.  
**Project Management & Methodologies:** JIRA, Kanban, Scrum, ClickUp, Notion, Confluence.  
**Architecture & Design:** RESTful Web Services, Microservices, Clean Architecture, CQRS, Event-Driven Architecture.  
**ML/DL & Data:** PyTorch, TensorFlow, DVC, Scikit-learn, Pandas, Matplotlib, Seaborn.  
**Testing:** Jest, Pytest, PHPUnit, Cypress, Selenium, JMeter.  
**UI/UX:** Figma, Design Sprints, User Testing.  
**Other Highlight Skills (over 2 years of experience):** Go, Next.js, Firebase, Supabase, OpenAI API, LangChain, LangGraph, Label Studio.

## Experience

Accion Tecnológica S.A. ([WebParaguay](#)) | Dec. 2013 - Present

- Dec. 2013 - Jun. 2015: **Web Developer**
  - Designed, developed, and deployed 10+ websites with SEO optimization and responsive layouts.
  - Created mock-ups and prototypes using Illustrator and Photoshop.
  - Implemented pixel-perfect code with HTML, CSS, JavaScript, and jQuery.
  - Built CMS solutions with PHP, Laravel, and MySQL.
  - Deployed and maintained websites on Apache servers via FTP.
- Jun. 2015 - Oct. 2022: **Full-Stack Software Engineer**
  - Developed 30+ software projects end-to-end across web, mobile, desktop, AI, and automation in multiple industries.
  - Designed software architectures based on stakeholder requirements, producing API contracts, technical decision records, dataflow diagrams, and proofs of concept.
  - Facilitated Design Sprints including user persona definition, value mapping, low- and high-fidelity prototyping in Figma, and user testing.
  - Implemented backend solutions in monolithic and microservices architectures with Laravel, Express, NestJS, Flask, Django, FastAPI, and Spring Boot, using MVC, Onion, CQRS, and Hexagonal patterns with Kafka, RabbitMQ, and Temporal (Go).
  - Implemented web, desktop, and mobile frontends with React, React Native, Vue, and Electron, integrating via Axios, Fetch, or React Query. Applied Redux, Pinia, and Vuex for state management, documented components in Storybook, used atomic and component-driven design, and applied optimizations including lazy loading, memoization, tree shaking, and gzip compression.
  - Tested software with unit, integration, and end-to-end tests using Jest, Pest, React Testing Library, Testcontainers, Cypress, and Selenium, with test cycles documented in QMetry.
  - Designed and deployed infrastructure on AWS, DigitalOcean, and on-premise environments with EC2, Droplets, and Kubernetes, using Terraform, Pulumi, and Docker.
  - Implemented CI/CD pipelines with GitHub Actions, Bitbucket Pipelines, GitLab CI, Ansible, SSH, and ArgoCD.
- May 2019 - Jul. 2021: **Technical Project Manager**
  - Gathered project requirements with stakeholders, focusing on objectives and expectation statements.
  - Created project schedules based on requirements and resource allocation.
  - Led projects using Scrum methodology in the roles of Scrum Master and Tech Lead, facilitating ceremonies and managing sprints.
  - Mediated negotiations between team members and stakeholders to align product goals with development feasibility and maintain team well-being.
  - Provided technical support and oversight in technical and architectural decisions.
- Jul. 2021 - Oct. 2022 / Jan. 2024 - Aug. 2024: **CEO/CTO**
  - Managed company operations and set strategic direction, defining objectives and KPIs.
  - Conducted financial analysis, budgeting, and cost control to optimize resource allocation.
  - Directed asset management and procurement, implementing operational efficiency initiatives.
  - Led multidisciplinary teams, defining roles, workflows, and performance metrics.
  - Designed and optimized business processes using process mapping and KPI tracking.
  - Provided consulting for startups, including business modeling, technical feasibility analysis, and project coordination.
- Jul. 2021 - Present: **Board Member**
  - Contribute to strategic alignment of the company.
  - Review and approve budgets, financial reports, and major investments.
  - Participate in high-level decision-making processes.

AI Model Trainer ([Turing](#)) | Oct. 2022 - Jan. 2024

- Developed software for a world-leading AI company, solving complex coding problems to improve AI models.
- Participated in code reviews and produced technical documentation.
- Optimized algorithms to reach time and space optimal complexity.
- Designed and executed comprehensive test suites, including boundary and performance tests.

## Senior Backend Software Engineer (Plub) | Aug. 2025 - Present

- Contributed to the migration of the core system from a monolithic architecture (Python, FastAPI) to a microservices architecture (TypeScript, NestJS).
- Defined code guidelines for the implementation of clean architecture.
- Designed migration strategies per microservice using the Strangler Fig pattern to minimize disruption to parallel initiatives.
- Led the internalization and standardization of the product master, preparing for the implementation of a new WMS (Warehouse Management System).
- Planned an API-first brownfield structure for the project.
- Documented the AS-IS state of the system and conducted in-depth analysis.
- Provided technical supervision of the development team.
- Defined authorization and authentication policies using Kong API Gateway, RBAC, and SSO.
- Led the migration of the electronic invoicing provider, including provider selection, migration planning, and development of microservices for provider communication and orchestration with Temporal and Go — **reducing costs by 73%**.
- Led the development of the customer segments microservice.
- Contributed to the TMS provider migration, developing domain master microservices, provider adapters, and order delivery orchestrators.
- Enabled adoption of a promotion engine, designing dataflows and cache invalidation policies to minimize provider API calls (reducing costs) with Temporal, while developing domain master and adapter microservices.
- Enhanced infrastructure reliability, reducing latency and increasing availability by improving EKS autoscaling policies and resource utilization.
- Advised business teams on technical decisions, improving operability and reducing infrastructure costs, while supporting other areas with development expertise.
- Streamlined deployments across development, testing, and production using Go, Terraform, CircleCI, AWS ECR, and Kubernetes — eliminating bottlenecks through decentralization and reduced deployment times.
